Baby yoda costume infant

You don't have to be a Star Wars fan to know about baby Yoda. The adorable, green-skinned, power-wielding toddler known as Baby Yoda debuted in the first episode of the Star Wars spinoff series, *Mandalorian*, which premiered on streaming service Disney+ in November. From the moment Baby Yoda appeared on screen, it was a swift evolution into a global viral phenomenon for series creator Jon Favreau, the rest of the show's creative team and a character officially called The Child by Star Wars studio Lucasfilm. Even after one season of Disney+ *Mandalorian*, there's still a lot we don't know about The Child, which remains Baby Yoda in the hearts and minds of its rapidly expanding fan base. From his origins to his home planet, many mysteries surround baby Yoda heading into Season 2 of the *Mandalorian*. Here's what we know about baby Yoda so far: What species is baby Yoda? Little is known about the baby Yoda species. In fact, the toddler is the third member of his species to appear in the live-action Star Wars universe over the years. In addition to the famous Jedi Master (and franchise icon) Yoda, the only other members of the Baby Yoda species we've seen in the Star Wars universe are the female character Yador (who appeared in *Star Wars: The Phantom Menace*) and this new, young character who is likely to be forever known as baby Yoda, no matter how old he is. Like much of the Star Wars universe, franchise creator George Lucas deliberately left yoda seeds unidentified. Given that almost every creature that appears in Star Wars movies and TV shows is seed-named and often given a back story, the omission of Baby Yoda's species has given a long-standing mystery to the canon of the Lucasfilm saga. That mystery was one of the inspirations for Jon Favreau's series, and along with a heaped dose of cuteness, it made baby Yoda into Disney+ flagship series, *Mandalorian*'s breakout character. What is known about Baby Yoda? Two things we know are that baby Yoda is about 50 years old and a male of the species. In the first episode of the Disney+ series, *Mandalorian* (aka *Dinh Jarin*) is told that the target he is hired to track down is around that age (adding surprise when he discovers a young creature), and a former imperial scientist who later examines Baby Yoda confirms that information. Yoda herself was living to be about 900 years old in the Star Wars universe, so it makes sense that Baby Yoda would still be a young child at the age of 50. During his examination of baby Yoda, the former Imperial scientist also confirmed his status as a male of the species and referred to the character as he. Officially licensed Disney products also refer to characters as men, so certain questions seem to have been answered. Is Baby Yoda a clone? Suggested there is a possibility that baby Yoda. The idea that Baby Yoda canThe original Yoda clones initially seemed to make sense given the widespread use of cloning in the wars that pre-formed the Galactic Empire - adly known as the Clone Wars. As seen in Lucasfilm's Star Wars prequel and the long-lasting Star Wars: The Clone Wars animated series (which recently ended with Disney+), the Galactic Republic used a huge army of clones in its fight against the Trade Federation, where clones turned on the Jedi in Star Wars: *Revenge of the Sith*, laying the groundwork for the rise of the Galactic Empire. We can only hope that Darth Vader Esk's turn to the dark side is not baby Yoda's future. Luckily, in *mandalorian* episode seven, Jaryrn's new friend Quuil appeared to deny the cloning theory when it showed that baby Yoda didn't look like a product of cloning. Given that Kuuil is a former imperial worker familiar with the cloning process, he probably knows the signs of the clone story - even an adorable clone like baby Yoda. How powerful is Baby Yoda? another thing that the Disney+ series abundantly reveals is that baby Yoda seeds have strong control of the Force in Lucasfilm's Star Wars universe. Both members of the Baby Yoda species we've seen in the past are high-class Jedi Masters, and now it makes sense that Baby Yoda is equally adept at using the Force, displaying equally powerful abilities. It is also interesting to note how much toll seems to take baby Yoda using the Force. The little guy tends to fall into a deep sleep after extensive use of his powers - something we have never seen with the old Yoda. For baby Yoda, mastery of the Force obviously requires some practice and some physical growth to fully take advantage of its potential. Where did Baby Yoda come from? We don't know much about how baby Yoda came to care for a group of heavily armed bounty hunters on a remote planet, but the second season of *Mandalorian* seems ready to investigate that question as Jaryrn is about to bring Baby Yoda home. It's reasonable to expect that part of the *Mandalorian*'s mission will include him following baby Yoda's path to that barren planet, so some clues are likely to present themselves as the Disney+ show goes deeper into Star Wars universe lore. Why does the former Imperial want baby Yoda? So far, the Disney+ Show doesn't fully explain why the enigmatic former Imperial agent known as The Client, or his more deadly boss, Moff Gideon, who served under Darth Vader, badly wants baby Yoda. In the short time that baby Yoda was caring for them, the former imperial scientist was instructed to extract

something from the body of a power-wielding toddler. This led some fans to suggest that the former Galactic Empire was trying to reassert its power through experiments with the mischlorian, an imaginary cell in the Star Wars universe that theoretically allows it to manipulate the Force. Abundant among those wielding powerful powers like baby Yoda. Knowing all of that, it's easy to see why Baby Yoda's powerful dominance of the Force and his connection to the greatest Jedi Master of all time makes it an interesting asset for the rest of the Galactic Empire to investigate. The dangers of the Star Wars universe seem far off as they ended for baby Yoda. Why isn't baby Yoda in the movies? Mandalorians are set between the events of Star Wars: Return of the Jedi and Star Wars: The Force Awakens, so it's likely that the show's adorable co-stars are still alive when Ray, Finn, and the heroes of the sequel three-part later gather, along with members of baby Yoda's species who have been alive for hundreds of years. Whether that means baby Yoda is destined to meet his end on the Disney+ show before the rise of the First Order in The Force Awakens, or whether he and (hopefully) Jarryn still don't know that they live their lives peacefully on some remote planet. One thing we do know is that no baby Yoda or his caretaker will certainly appear in any of the three Star Wars space movies set after the curious Return of the Jedi. Is Baby Yoda a doll? In line with the magic of modern Star Wars movies, baby Yoda is brought to the Mandalorian screen through a combination of practical puppetry, animatronics, and computer-generated effects. The Baby Yoda doll was created for the Disney+ series by special effects studio Legacy Effects and reportedly cost \$5 million to produce. Doll technicians control baby Yoda's eyes, mouth and other facial features, and a mixture of human and animal sounds is used for baby Yoda's voice. On January 16, George Lucas also appeared in a photo posted by Jon Favreau with a baby Yoda doll. pic.twitter.com/y121exlBTZ— Jon Favreau (@Jon_Favreau) January 17, 2020 Why was Baby Yoda kept secret? Jon Favreau was reportedly inspired to keep baby Yoda's presence a secret for his conversation with solo: Star Wars Story actor Donald Glover, who lamented the lack of real surprises in the modern entertainment world. Disney has made the surprising decision to go according to plan and keep Baby Yoda a secret in order to preserve the discoveries Disney+ subscribers will experience when baby Yoda first appears in the series premiere of Mandalorian. What happens to Baby Yoda in Season 2? Now that the Mandalorian has vowed to protect baby Yoda and bring him back home, we are likely to learn the answers to some of these questions. Mandalorian 2 returns to Disney+ in October. At the moment, Disney has not revealed any details about the future of Baby Yoda or Jarryn, but even months after the first season of the Disney+ show ended, the Baby Yoda train shows no signs of slowing down.
